Institutional Analysis

**Programs with 10 or less graduates may not result in reliable averages due to the high variability of the small number of graduates*

Introduction: A typical associate program is 60 credits and is designed so a full-time student (enrolled in 12+ credits per semester) can complete in 2 years. Some students begin an associate program with Advanced Placement credits or Dual credits earned while in high school which may contribute to a shorter time to degree completion. Some students are part-time, change their major or do not enroll some semesters which may contribute to a longer time to degree completion.
